# Homework Time Estimator

MVHacks 4.5   Created by Siddhartha, Nathan, and Ryan

About Our Project

Our project is a program that takes in homework times from all our users to find averages for each homework assignment. With enough data, our program will be able to come up with decently precise estimation times on its own just by knowing the type of homework.

Why Our Project Matters

If you've ever done homework, you know it is hard to prioritize and figure out which assignments will take more time. Our app makes it simple for all students to organize their homework.

Now Time for the Demo
